- **Updated NWL Product Sheets**

Reinhold show review

Reinhold Environmental hosted their annual Air Pollution Control/Pollution Control Users Group (APC/PCUG) in The Woodlands, TX from 12-18 July. Dave Seitz and Helmut Herder, NWL's President and VP Sales, were in attendance. Their observations can be summarized as follows:

- Electric utilities have pushed out most major upgrade projects into 2010 or 2011.
- Cap and trade will not be a successful way to curb carbon dioxide emissions until there is a reasonable technological solution.
- Switchmode power supplies have now become the default energization technology for electrostatic precipitators.

New PowerPlus [White Paper](#) just published

Gary Grieco of Air Consulting Associates has just completed a paper describing the performance improvements precipitator owners can realize through the use of NWL's PowerPlus switchmode power supplies. The paper can be found [here](#).

PowerPlus product improvements

We have recently made some component and design changes to PowerPlus to increase reliability and functionality. We are using new terminal blocks and have modified our switch box so that it can be rotated in different orientations. For more details, click [here](#).

NWL is proud to offer you:

- Transformer spare parts support
- Field service coverage within North America
- Transformer testing services
- [Power supply and rapper control upgrades](#)
- Installation support and start-up assistance
- [Full range of service, from emergency repair to total refurbishment](#)

New Product Sheets

We've updated product sheets for both our interface modules:

- [Precipitator Control and Management System \(PCAMS\)](#)
- [Distributed Control System interface \(DCSi\)](#)
